Merging Surveys with Multidimensional Interpolation\* Daniel Trad<sup>1</sup>, Matt Hall<sup>2</sup>, and Milka Cotra<sup>1</sup> Search and Discovery Article #41552 (2015) Posted February 23, 2015 \*Adapted from extended abstract prepared in conjunction with a presentation given at CSPG/CSEG/CWLS 2008 GeoConvention, Calgary, AB, Canada, May 12-15, 2008,

### **Merging Surveys with Multidimensional Interpolation\***

Although kriging was developed originally for applications in geostatistics, it is a general method of statistical interpolation that can be applied within any discipline to sampled data from random fields that satisfy the appropriate mathematical assumptions.

Geocoding is the computational process of transforming a physical address description to a location on the Earth's surface (spatial representation in numerical coordinates). Reverse geocoding, on the other hand, converts geographic coordinates to a description of a location, usually the name of a place or an addressable location. Geocoding relies on a computer representation of address points ...

Systems Simulation: The Shortest Route to Applications. This site features information about discrete event system modeling and simulation. It includes discussions on descriptive simulation modeling, programming commands, techniques for sensitivity estimation, optimization and goal-seeking by simulation, and what-if analysis.

By convention, polyacrylamide gels are characterized by a pair of values, %T and %C (13). In this convention, %T is the weight percentage of total monomer (acrylamide + bis) in g/100 ml and %C is the proportion of bis as a percentage of total monomer.
