In mathematics, economics, and computer science, the stable marriage problem (also stable matching problem or SMP) is the problem of finding a stable matching between two equally sized sets of elements given an ordering of preferences for each element. A matching is a mapping from the elements of one set to the elements of the other set. A matching is not stable if:

Stable marriage problem - Wikipedia

The Ford–Fulkerson method or Ford–Fulkerson algorithm (FFA) is a greedy algorithm that computes the maximum flow in a flow network. It is called a "method" instead of an "algorithm" as the approach to finding augmenting paths in a residual graph is not fully specified or it is specified in several implementations with different running times. It was published in 1956 by L. R. Ford, Jr. and ...

Ford–Fulkerson algorithm - Wikipedia

Dynamic programming is a technique used to avoid computing multiple times the same subproblem in a recursive algorithm. Let's take the simple example of the fibonacci numbers: finding the n th fibonacci number defined by $F_n = F_{n-1} + F_{n-2}$ and $F_0 = 0, F_1 = 1$. Recursion

algorithm - What is dynamic programming? - Stack Overflow

This is a project I started from late January 2016. My motive is that: Although there's fantastic information out there, I think they're still spread all over the place.

An awesome list for competitive programming! - Codeforces

A huge list of books about the theory and methods of computing, software development, algorithms, artificial intelligence; computer science monographs
