Control theory in control systems engineering deals with the control of continuously operating dynamical  
systems in engineered processes and machines. The objective is to develop a control model for controlling  
such systems using a control action in an optimum manner without delay or overshoot and ensuring control  
stability.. To do this, a controller with the requisite corrective behaviour is ...

A control system manages, commands, directs, or regulates the behavior of other devices or systems using  
control loops.It can range from a single home heating controller using a thermostat controlling a domestic  
boiler to large Industrial control systems which are used for controlling processes or machines.. For  
continuously modulated control, a feedback controller is used to automatically ...
